

LAUKIK UPADHYAY

Software Development Engineer (SDE) | Software Development Engineer in Test (SDET)

+91-9863711132 • laukikbhardwaj183@gmail.com • LinkedIn • GitHub • Bengaluru, India

PROFESSIONAL SUMMARY

Software Development Engineer and SDET who **ships product features and the automation that proves they work**. Builds feature modules inside the **ReportPortal platform codebase** — permissions and RBAC, API key management, daily tracking and records — in **Java and React**, working within an established open-source project rather than greenfield. In parallel, owns automated quality across **mobile, web and API** with Appium, Playwright and REST Assured, wired into CI/CD. Owns work end to end, from design and implementation through test strategy to release readiness.

TECHNICAL SKILLS

Development	Java (Core & Advanced), Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, REST APIs, ReactJS, JavaScript, Tailwind CSS, Bootstrap, HTML5, CSS3
Databases	PostgreSQL, MySQL, SQL, schema design, normalisation, query optimisation
Platform & Security	Role-based access control (RBAC), feature-level permissions, API key issuing / scoping / rotation, admin & user management, records and data management
Test Automation	Playwright, Page Object Model, Appium, Appium Inspector, BrowserStack, device farms, TestNG, JUnit, REST Assured, Postman, Newman, API contract & schema validation, parallel execution
Manual QA	Test planning and case design, functional, smoke, regression, exploratory and cross-browser testing, defect lifecycle, root-cause analysis
Reporting & CI/CD	ReportPortal dashboards and widgets, auto-analysis, defect classification, failure triage, Jenkins, CI/CD pipelines, Maven, Docker
Tools & Concepts	Git, GitHub, Jira, Linear, VS Code, Eclipse, OOP, Collections Framework, Agile/Scrum, code review, debugging

PROFESSIONAL EXPERIENCE

BestQ

Jul 2024 – Present

Full-time • Bengaluru (Remote) • Clients: **BRILLO.AI**, **VTION**, **VEOTS**

Software Development Engineer (SDE) — ReportPortal Platform • Java & React

- **Permissions & Access Control (RBAC):** Built the permission module inside the ReportPortal codebase — role-based project access, feature-level permissions over individual actions rather than whole pages, and the admin interface for creating users, assigning roles and auditing access.
- **API Key Management:** Implemented issuing, scoping, rotation and revocation of the API keys CI pipelines and integrations authenticate with, carrying permission scope on the key itself rather than inheriting it from its creator.
- **Daily Tracking & Reporting:** Built daily run tracking and reporting so teams read quality as a trend across days rather than a verdict per build, surfacing regressions before a release gate.
- **Records & Data Management:** Implemented storage, querying and export paths for launch and test-item records, keeping history searchable as data volume grows.
- **Dashboards & Defect Classification:** Designed dashboards and widgets for pass/fail trends, flaky-test detection and failure distribution; configured launch attributes and tags (environment, build, browser, test type) for filtering; set up defect classification — Product Bug, Automation Bug, System Issue — with auto-analysis.

- **Ingestion & CI/CD:** Integrated Playwright suites to publish launches, suites, test items, logs, screenshots and attachments automatically; consumed ReportPortal REST APIs and wired publishing into CI/CD. Delivered throughout inside an established open-source Java and React platform, through peer review and Git-based workflows.

Software Development Engineer in Test (SDET) — Mobile, Web, API & Manual

- **Mobile Automation:** Appium automation for Android covering install, launch, login, navigation and core journeys, using explicit waits and gesture APIs for stability; ran on emulators, real devices and BrowserStack through a shared device farm, validating APK install flows with parallel cross-device and cross-OS execution.
- **Web Automation:** Built and maintained end-to-end Playwright suites on the Page Object Model with reusable fixtures, resilient locators, auto-waiting and parallel execution.
- **API Testing:** Verified REST APIs for status codes, payloads, schema, headers, authentication and error handling with REST Assured and Postman, automated to run alongside the UI suite.
- **Manual QA:** Wrote test plans, scenarios and cases from requirements; ran functional, smoke, regression, exploratory and cross-browser cycles and drove defects through their full lifecycle.
- **Test Stability:** Cut flaky tests through explicit waits, isolated test data and a deliberate retry strategy; tracked stability on ReportPortal with developers and product owners across Agile sprints.

PROJECTS

Courier & Logistics Tracking System Java · PostgreSQL · SQL | Apr 2024 – May 2024

- Console-based courier tracking system in Java applying core **OOP principles**, with a **normalised PostgreSQL schema** across Customer, Warehouse, Delivery Agent, Package, Payment and Tracking entities and their one-to-many and many-to-one relationships.
- Shipment lifecycle tracking with **status enums and timestamp-based history**, using the Java Collections Framework for in-memory filtering before persistence.

ABCs of Make-Up Java · ReactJS · PostgreSQL · SQL | Feb 2024 – Mar 2024

- **Full-stack web application** with Java backend logic and a ReactJS front-end, over a PostgreSQL database for users, tutorials and contact-form data.
- **REST-style request and response handling** in Java, with a contact form that persists user queries for follow-up.

EDUCATION

Bachelor of Technology, Computer Science **CGPA 7.8 / 10**
Chandigarh University, Punjab Jun 2024

Diploma in Programming **CGPA 8.4 / 10**
NICT — North Eastern Institute of Computer Technology, Meghalaya Mar 2021

ACHIEVEMENTS & CERTIFICATIONS

- **Gold Badge — Java Programming**, HackerRank
- **Java Full Stack Development**, JSpiders, Bengaluru
- **"A" Grade in Diploma**, NICT, Meghalaya · **Class Representative**, Chandigarh University
